Now, variable cost per unit= $\frac{320000}{25000}$= 12.80

- **Break even analysis:**

  Fixed cost (yr)= 11,84,000

  Variable cost (yr)= 3,20,000

  Selling price (per unit) =30

  Now,

  Breakeven quantity=$\frac{1184000}{30-12.80}$= 68838 unit (yearly)

  - Monthly = 5737 unit

- **Breakeven span:**

  Breakeven unit= 68838 unit

  Assumed yearly production and sales = 2500

  Time to breakeven = $\frac{68838}{2500}$= 2.7 yrs= 2 years and 7months

The Entrepreneurship Development project on *Mohaa Choco* presents a comprehensive and well-structured business plan aimed at launching a premium yet affordable chocolate brand in Bankura. Founded by Meghna Das, the brand is built on the emotional concept of "Chocolate for Every Bond," offering products tailored for all age groups—from kids to elders—with a special focus on sugar-free and nostalgic variants.

From ideation to financial forecasting, the project carefully outlines all crucial aspects, including market analysis, production planning, pricing strategy, branding, sustainability, and social impact. Despite initial challenges such as market competition, limited awareness, and a projected Year 1 loss of ₹7.54 lakhs, the business shows potential through innovation, strong emotional branding, and phased expansion strategies.

Mohaa's commitment to quality, community support, and eco-friendly practices gives it a unique positioning in the local market. With strategic investments, adaptive marketing, and continuous product improvement, Mohaa Choco is well-poised to grow from a local favourite to a regionally recognized and socially responsible chocolate brand.
